RHEO

CAPITAL & GROWTH

Building the Global Capital Rail for the Energy Economy

DEVELOPMENT CAPITAL

US$20M

Proposed capital allocation

10-YEAR GROWTH AMBITION

US$48B+

Target network-enabled project value

YEAR 1 PIPELINE TARGET

US$100M

Qualified and documented pipeline

INITIAL DEVELOPMENT

12 Months

Infrastructure and institutional validation

1. The Global Opportunity

The global energy economy represents trillions of dollars in annual investment across power generation, energy storage, grids, industrial infrastructure, data centres and distributed energy systems.

Rheo is developing the financial and verification infrastructure to connect these sectors with capital.

The opportunity is to make physical energy capacity measurable, verifiable and financially actionable — enabling projects, infrastructure and productive assets to be assessed, coordinated, financed and scaled across markets.

2. US$20M — Capital Deployment

PROPOSED DEVELOPMENT CAPITAL ALLOCATION

Capital allocation	Budget
Platform engineering, AI and system development	US$5.0M
Energy identity, verification, cybersecurity and audit infrastructure	US$3.5M
Physical infrastructure integration and deployment	US$4.0M
Institutional partnerships and commercial development	US$3.0M
Legal, regulatory, governance and financial infrastructure	US$2.0M
Operations, talent and programme management	US$1.5M
Contingency and deployment reserve	US$1.0M
TOTAL	US$20.0M

The capital establishes the technology, security, operational and institutional foundations required to develop Rheo into a scalable financial infrastructure network for the energy economy.

3. First 12 Months — Development & Deployment

1. **Days 1–30 | Capital & Architecture**

   Establish capital, governance, technical architecture and institutional execution framework.

2. **Days 31–90 | Core Infrastructure**

   Develop the core platform, Energy ID, asset authentication and verification infrastructure.

3. **Months 4–6 | Energy Integration**

   Integrate generation, storage and consumption assets; establish end-to-end energy measurement and verification.

4. **Months 7–9 | Financial Infrastructure**

   Develop the Virtual Power Server, Power Credit accounting and energy-to-financial reconciliation.

5 **Months 10–12 | Institutional Validation**

Complete institutional validation, commercial integration and initial deployment transactions.

12-MONTH MANAGEMENT TARGETS

US$100M

Qualified and documented project pipeline.

- 1–3 institutional relationships.
- Integration across multiple energy asset categories.
- Operational energy verification and accounting capabilities.
- Initial monetised commercial transactions.

Proposed execution targets, subject to institutional participation and deployment progress.

4. US$48B+ — Ten-Year Growth Projection

The objective is to build a network capable of facilitating and supporting an increasing volume of energy infrastructure and productive economic activity.

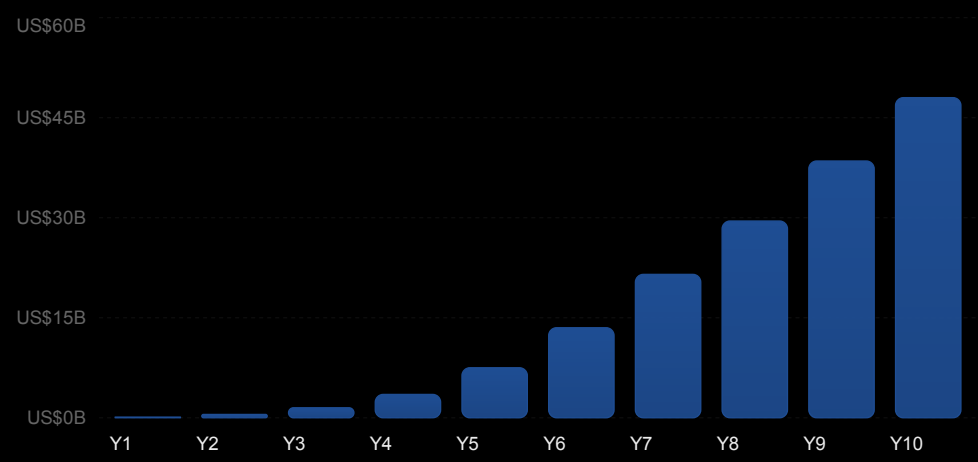

Year	Annual project value	Cumulative value
Year 1	US$0.1B	US$0.1B
Year 2	US$0.4B	US$0.5B
Year 3	US$1.0B	US$1.5B
Year 4	US$2.0B	US$3.5B
Year 5	US$4.0B	US$7.5B
Year 6	US$6.0B	US$13.5B
Year 7	US$8.0B	US$21.5B
Year 8	US$8.0B	US$29.5B
Year 9	US$9.0B	US$38.5B
Year 10	US$9.5B	US$48.0B

TEN-YEAR CUMULATIVE GROWTH AMBITION

US$48B+

Target network-enabled project value.

Illustrative cumulative project-value growth, US$ billions.

Illustrative management growth scenario, not a secured pipeline or forecast of contracted projects.

5. Target Project Value — Sector Allocation

Sector	Target value
Energy generation and storage	US$18B
Grid infrastructure and distributed energy resources	US$10B
Industrial and commercial infrastructure	US$8B
Data centres and critical infrastructure	US$8B
Residential and community energy	US$4B
TOTAL	US$48B

These are strategic allocation assumptions for the growth scenario, not secured project commitments.

6. Revenue Model

Rheo's revenue model is designed around the financial activity enabled by its infrastructure.

Revenue stream	Commercial application
Energy identity and verification	Asset registration, authentication and verification services
Energy accounting	Measurement, reconciliation and reporting
Capital coordination	Fees on eligible project financing and capital facilitation
Virtual Power Server	Infrastructure access, subscriptions and capacity coordination
Financial infrastructure	Billing, settlement, integration and transaction services

Illustrative cumulative fee sensitivity

Based on US$48B in eligible fee-bearing project value:

US$48M	US$144M	US$240M
0.1% fee	0.3% fee	0.5% fee

Illustrative sensitivity only. Actual revenue depends on eligible fee-bearing activity, commercial rates and completed transactions. It does not assume that every dollar of project value generates a fee.

7. Power Credit Accounting

Rheo's energy accounting framework connects verified physical output with a measurable credit unit.

1 kWh	1 MWh
1 Power Credit	1,000 Power Credits

Physical-to-financial measurement

- 1 MW represents the rate of power delivery.
- 1 MW operating at full output for one hour produces 1 MWh.
- 1 MWh equals 1,000 kWh.
- 1,000 kWh equals 1,000 Power Credits once verified and accounted for.

Power Credits measure energy. Their monetary value is determined separately through applicable tariffs, contracts or market mechanisms.

This creates a consistent accounting layer between physical energy production, consumption, infrastructure performance and financial activity.

8. Growth Measurement

Rheo's progress will be measured through the conversion of network activity into verifiable economic value:

1. Identified projects converted into qualified opportunities.
2. Qualified opportunities converted into contracted projects.
3. Contracted projects connected to verified assets.
4. Verified assets translated into financed or deployed capacity.
5. Facilitated transactions converted into collected revenue.

The objective is to build interoperable financial infrastructure that can scale across energy producers, infrastructure developers, industrial users, data centres, financial institutions and capital providers.

US$20M → US$48B+

Building the Global Capital Rail for the Energy Economy.

US$20M proposed development capital. US$48B+ ten-year cumulative target network-enabled project value.

Financial positioning: The US$48B figure represents the cumulative value of projects and productive assets Rheo aims to connect, verify, coordinate or facilitate through its network. It is not Rheo revenue, company valuation, assets under management or capital directly owned by Rheo.
